

## Tech stack

SiNo	Implementation	Tech Stacks Used	Version	Description
1	Building of Webpages	HTML	HTML-5	HTML is the standard markup language for creating webpages. <b>We have used it in our project to build a very creative designed pages.</b>
2	Styling of webpages	CSS	CSS 3	Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML. <b>We have used it extensively to make our webpages look more beautiful and a theme based.</b>
3	Framework for CSS	Bootstrap	BS-4	Bootstrap is a powerfull framework that is used for making the page usable in allmost all devices. <b>We have used BS for making our pages more responsive to all devices.</b>
4	Making pages Interactive	Javascript	Js-ES6	Javascript often abbreviated as JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. <b>We have made use of JS for making the page more interactive like adding products to the cart for checkout.</b>
5	Version control system	Git	GitHub	Git is one of the popular version control system. <b>We have made use of it to properly update each version of our website to attain the proper output.</b>
6	Hosting	GitHub		Github not only act as a VCS also it helps us to host our static pages online. <b>We have made use of GITHUB to host our website only. We can access it through a subdomain.</b>
